**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

### Office Action Summary

**Application No.**

10/693,359

**Applicant(s)**

DEVLIN ET AL.

**Examiner**

Patrick D. Niland

**Art Unit**

1796

**Period for Reply** -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 19 December 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1, 4-8 and 11-22 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1, 4-8, and 11-22 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/S508)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/19/07 has been entered.

The amendment of 11/16/07 has been entered. Claims 1, 4-8, and 11-22 are pending.

2. Claims 4-5 and 11-12 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the disclosed substituents, does not reasonably provide enablement for all of the substituents encompassed by "substituted" of the instant claims. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention commensurate in scope with these claims. It is noted that claims 5 and 12 recite "unsubstituted" but due to the last lines of claims 1 and 8 mixtures with the substituted compounds are encompassed in claims 5 and 12 resulting from the language of claims 4 and 11.

A. The instant claims 4-5 and 11-12 recite "substituted" without specifying the substituents. Therefore the claims encompass all possible substituents. The instantly claimed "substituted" reads on an infinite number of compounds resulting from the potentially infinite number of substitutions which can be performed on the recited compounds. In re Wands has 8 criteria, (MPEP 2164.01(a)), as shown below.

(A)The breadth of the claims;

(B)The nature of the invention;

(C)The state of the prior art;

(D)The level of one of ordinary skill;

(E)The level of predictability in the art;

(F)The amount of direction provided by the inventor;

(G)The existence of working examples; and

(H)The quantity of experimentation needed to make or use the invention based on the content of the disclosure.

It is noted that the instant claims read on all potential substitutions of the recited compounds which encompasses an infinite number of compounds (Wands factor A). The specification does not describe how to make all such substituents, how to add them to the claimed compounds, nor how to select those substituents from the infinite list thereof which will function as required in the instant invention (Wands factors F, G). It would require an infinite amount of experimentation to determine how to make all of the substituents encompassed by the instant claims and another infinite amount of experimentation to determine which of these substituted compounds would function in the instantly claimed invention as required (Wands factor H). Chemistry is an unpredictable art (Wands factor E). The ordinary skilled artisan has not imagined nor figured out how to make all of the substitutions encompassed by the instant claim of “substituted” yet (Wands factors C, D, E, F, G, and H). The enabling disclosure is not commensurate with the full scope of the claimed “substituted”.

3. Claims 1, 4-8, and 11-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A. The instant claims 1 and 8 recite “including” with regard to component b. “Including” implies that other components are required. It is unclear what these other components are because they are not recited which is a failure to particularly point out and distinctly claim the subject matter which applicant regards as the invention as required by statute.

B. It is unclear what is encompassed by “minor amount” and “major amount” of claims 6 and 13 because these are relative amounts. The terms “minor amount” and “major amount” are not defined by the claims, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. It is therefore unclear what is intended by “minor amount” and “major amount”.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 4-5, 7-8, and 11-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cook et al. (U.S. 2002/0119895) in view of Burjes et al. (U.S. 4,755,311), *STN* structure, and US Pat. No. 4293432 Papay et al..

Cook et al. disclose composition used as gear lubricant and in turbines wherein the composition comprises polysulfide or sulfurized olefin, dithiocarbamate, i.e. friction modifier, and amine salt of monothiophosphoric acid wherein the amine includes N-oleyl-1,3-diaminopropane and which corresponds to the presently claimed combination of hydrocarbylamine and alkylphosphoro(mono)thioate. It is noted that, as disclosed by *STN* (retrieved from the Internet: <URL: <http://www.stn.cas.org/>>), that N-oleyl-1,3-diaminopropane is equivalent to N-oleyl trimethylene diamine as presently claimed. Further, given that the N-oleyl-1,3-diaminopropane is identical to that presently claimed, it is clear that it would also intrinsically function as a friction modifier as presently claimed. For specific types of monothiophosphoric acid, Cook et al. refers to Burjes et al. (incorporated by reference) which discloses monothiophosphoric acids of the formula:

where  $\text{R}^1$  and  $\text{R}^2$  are each hydrocarbyl groups such as alkyl group containing 1-30 carbon atoms (col.3, lines 52-56, col.3, line 66-col.4, line 2, and col.4, lines 33-45). It is disclosed that the composition is used as either a concentrate wherein the above is combined with minor amount of diluent or as a lubricant wherein the above is combined with major amount of base oil possessing viscosity of SAE 75W-140. There is also a disclosure of method for making the lubricant. It is further noted that the lubricant has kinematic viscosity of at least 4 cSt. Cook et al. disclose that

the lubricant comprises 0.5-5% polysulfide or sulfurized olefin and 0.1-10% phosphorous agent, i.e. amine salt of monothiophosphoric acid, which corresponds to the presently claimed combination of hydrocarbylamine and alkylphosphoro(mono)thioate wherein the hydrocarbylamine also functions as friction modifier, which clearly overlaps the amount of sulfur containing compound and hydrocarbylamine/alkylphosphorothioate/friction modifier required in the presently claimed composition (paragraphs 1, 3, 77, 86, 93, 121-122, 129, 141, 173-175, 177, and 179) and phosphorus esters including those of phosphonic acid at section [0114].

While Cook et al. fails to exemplify the presently claimed concentrate or lubricant nor can the claimed concentrate or lubricant be “clearly envisaged” from Cook et al. as required to meet the standard of anticipation (cf. MPEP 2131.03), nevertheless, in light of the overlap between the claimed concentrate or lubricant and the concentrate or lubricant disclosed by Cook et al., it is urged that it would have been within the bounds of routine experimentation, as well as the skill level of one of ordinary skill in the art, to use concentrate or lubricant which is both disclosed by Cook et al. and encompassed within the scope of the present claims and thereby arrive at the claimed invention in view of the teachings of Papay et al.. Specifically, it would have been obvious to one of ordinary skill in the art at the time of the instantly claimed invention to use the instantly claimed component c in the composition of Cook et al. because Cook, section [0114] discloses the use of phosphorus esters including those of phosphonic acid at section [0114] as “wear/extreme pressure agents”, Papay et al., the entire document, particularly column 5, lines 6-37 and column 6, lines 65-67, which shows these phosphonates to “significantly reduce” friction which will clearly reduce wear since friction is the main source of wear and thus

the phosphonates of Papay, column 5, lines 6-37 are encompassed by section [0114] of Cook. Their stated effect on friction also makes them “friction modifying compounds” of the instant claims.

The previous arguments related to Cook are again referenced and are cited below.

6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cook et al. in view of Burjes et al. and *STN* structure as applied to claims 1, 4-5, 7-8, and 11-20 above, and further in view of Norman et al. (U.S. 5,942,470).

The difference between Cook et al. in view of Burjes et al. and *STN* structure and the present claimed invention is the requirement in the claims of the amount of each component in the concentrate.

Norman et al., which is drawn to additive concentrate for gear oils, disclose the use of concentrate that comprises 20-80% sulfur-containing component, i.e. polysulfide or sulfurized olefin, 1-15% amine salt of ester of phosphorous acid, 0.1-20% friction modifier and when in concentrate form, the amount of Papay's phosphonate of column 5, lines 34-37 will be increased due to the increased concentrations of additives in the concentrate form, and diluent oil in order to produce gear oil with improved positraction performance for long periods of time (col.1, lines 11-67, col.11, lines 37-40, and col.19, lines 12-25).

In light of the motivation for using sulfur-containing component, amine salt of ester of phosphorous acid, and friction modifier in concentrate in amounts disclosed by Norman et al. as described above, it therefore would have been obvious to one of ordinary skill in the art to use the sulfur-containing component, amine salt of ester of phosphorous acid, and friction modifier

in such amounts in the concentrate of Cook et al. in order to produce gear oil with improved positraction performance for long periods of time, and thereby arrive at the claimed invention.

7. Claims 21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cook et al. (U.S. 2002/0119895) in view of Burjes et al. (U.S. 4,755,311), *STN* structure, and US Pat. No. 4293432 Papay et al., as discussed in paragraph 5 above, and further in view of Laing et al. (U.S. 4,710,100).

Laing et al. disclose wind turbine comprising gear assembly wherein the gear assembly requires lubricant (col.1, lines 4-6 and col.3, lines 50-52).

The difference between Laing et al. and the present claimed invention is the requirement in the present claims of specific composition.

In light of the motivation for using specific lubricant disclosed by Cook et al. as described above in paragraph 5, it therefore would have been obvious to one of ordinary skill in the art to use such lubricant in the wind turbine of Laing et al. in order to produce turbine with good anti-wear properties, and thereby arrive at the claimed invention.

#### **Response to Arguments**

1. Applicants argue that each of the rejections utilizing Cook et al., i.e. Cook et al. in view of Burjes et al. and *STN* Structure or Laing et al. in view of Cook et al. is not proper given that the examiner has not established a *prima facie* case of obviousness. Applicants argue that there is no motivation to pick and choose all the claimed elements with reasonable expectation of success from Cook et al.

However, while it is agreed that one must choose thiophosphorous acid ester salt over thiophosphorous acid ester, then monothiophosphorous acid over phosphorodithioic acid, then amine over metallic, then polyamine over monoamine, and finally N-oleyl-1,3-diaminopropane, the fact remains that Cook et al. do explicitly disclose combination of hydrocarbylamine, i.e. N-oleyl-1,3-diaminopropane, identical to that presently claimed and alkylphosphoro(mono)thioate (as explicitly disclosed by Burjes et al. that is referred to by Cook et al.) identical to that presently claimed.

Further, while choices must be made to arrive at such combination, it is noted that each choice is not made from amongst a vast number of alternatives but from number of alternatives as small as two. Thus, it would have been obvious to one of ordinary skill in the art to utilize amine salt of monothiophosphoric acid in Cook et al., and thereby arrive at the claimed invention. Further, given that Cook et al. explicitly disclose the presently claimed load carrying capacity enhancing combination, one of ordinary skill in the art would have a reasonable expectation of success.

Applicants argue that the examiner utilizes impermissible hindsight.

However, in response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

Applicants argue that the examiner has mischaracterized the teachings of Cook et al.

However, attention is drawn to paragraph 86 of Cook et al. that discloses polysulfide such as sulfurized olefin corresponding to presently claimed (a), paragraph 93 that discloses dithiocarbamate, i.e. friction modifier corresponding to presently claimed (c), paragraphs 121, 122, 129, and 141 that disclose amine salt of monothiophosphoric acid wherein the amine includes N-oleyl-1,3-diaminopropane, i.e. load carrying capacity enhancing combination, corresponding to presently claimed (b), and paragraphs 174, 175, 177, and 179 that discloses diluent oil or base oil corresponding to presently claimed (d). Thus, it is clear that Cook et al. do in fact disclose concentrate and composition as presently claimed.

With respect to the rejection utilizing Norman et al. in combination with Cook et al. applicants argue that that there is no disclosure in Cook et al. that fatty diamine such as N-oleyl-1,3-diaminopropane as presently claimed, is equivalent and interchangeable with alkyl amine as disclosed by Norman et al. and that Cook et al. merely discloses several compounds of which fatty diamine and alkyl amine are two. Applicants also argue that one of ordinary skill in the art would recognize the different properties that fatty diamine would impart as opposed to alkyl amine.

However, it is noted that Norman et al. disclose the use of amine salt of one or more partial ester of one or more acids of phosphorous of the formula:

Art Unit: 1796

where  $R^5$ - $R^7$  are each hydrocarbonyl group and  $X^9$ - $X^{12}$  are each oxygen or sulfur and wherein the amine salt includes alkyl amine and that Cook et al. discloses amine salt of monothiophosphoric acid of the formula:

where  $R^1$  and  $R^2$  are each hydrocarbonyl groups such as alkyl group containing 1-30 carbon atoms and wherein Cook et al. disclose that such amine includes not only alkyl amine but also N-oleyl-1,3-diaminopropane. Thus, in terms of amine utilized with monothiophosphoric acid, it is the examiner's position that Cook et al. do disclose the equivalence and interchangeability of using fatty diamine with using alkyl amine. That is, given that Cook et al. disclose that alkyl amine and fatty diamine, i.e. N-oleyl-1,3-diaminopropane, are known amines for the amine salt of monothiophosphoric acid and given that Cook et al. discloses that alkyl amine and N-oleyl-1,3-diaminopropane are each used with monothiophosphoric acid in composition for gears, Cook et al. has recognized the equivalence of these amines which includes that presently claimed.

In light of the above, given that Norman et al. and Cook et al. are drawn to the same field of endeavor, i.e. composition for gears, and absent evidence to the contrary, it therefore would have been obvious to one of ordinary skill in the art to utilize fatty diamine that is N-oley-1,3-diaminopropane in Norman et al. While applicants argue that fatty diamine and alkyl amine have different properties, there is no evidence to support such position and no evidence how, or if, such difference would effect the properties of the presently claimed concentrate or composition. It is noted that case law holds that mere substitution of an equivalent (something equal in value or meaning as taught by analogous prior art) is not an act of invention; where equivalence is known to the prior art, substitution of one equivalence to another is not patentable, *In re Ruff* 118 USPQ 343 (CCPA 1958).

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick D. Niland whose telephone number is 571-272-1121. The examiner can normally be reached on M-R from 10-5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached on 571-272-1114. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
